

Notes on regression strategies 3/23

I tried a simple RF regression which seems to be making pretty solid predictions of mean-ish bills but not giving variation around that.

Natively pretty high accuracy

Internet suggests dnn might do better @ out of ~~ex~~ sample

I compared to a simple lm, rf does better

No obvious need for derived features [e.g. N/S]

in addition to base. DNN may do this.

DNN in R as keras, tensorflow.
