

Notes on regression strategies 3/23

I tried a simple RF regression which seems to be making pretty solid predictions of mean-ish bills but not giving variation around that.

Naively pretty high accuracy

Intense suggests dm might do better @ out of ~~the~~ sample
I compared to a simple lm, rf does better
No obvious need for derived features [e.g. N/S]
in addition to base. DNN may do this.

DNN in R as keras, tensorflow.
